

* %. ROWTYPE:- is used to declare a variable that can store an entire row from a table or cursor.

Instead of declaring each Column separately, Oracle creates variables for all columns automatically.

Ex:- DECLARE
 v- emp employee %. ROWTYPE;
 BEGIN

 END;
 /

* Record Datatype:- A Record is a user-defined data structure that can hold multiple values of different datatypes in a single variable.

%. Type → One Column

%. ROWTYPE → One Table Row

RECORD → Custom Row Created by Programmer
